THREE KEY POINTS

WHEN MANAGING HIGH-VOLUME OFFLINE & ONLINE CONTENT

Requirements around compliance, security and overall governance of information have transaction-heavy organizations searching for better ways to manage high-volume content and document output capabilities.

Consider the multitude of different content types and use-cases.

- Customer Statements
- Print Jobs
- Recurring Data
- Image Streams

1 STORAGE

The digital revolution is producing an ever-growing amount of data driving up the demand for larger amounts of storage.

By **2020** the digital universe – the data we create and copy annually – will reach 44 zettabytes, or 44 trillion gigabytes per year.

– IDC

2 SECURITY

Legal and regulatory challenges call for tighter security and governance controls. Investing in a cloud-based solution not only provides tightly monitored and maintained security environments, but also greater transparency and auditability.

By 2018, the **60%** of enterprises that implement appropriate cloud visibility and control tools will experience one-third fewer security failures.

– Gartner

3 AVAILABILITY

Users want quick, easy access to content without the hassle of logging into multiple systems across the organization or looking in silos to find information. A recent Gartner survey of information workers found that:

27% of those surveyed said they use at least one application that they have obtained for themselves, and that their organizations did not approve. Additionally, 20% of the respondents use such applications to engage with customers.

– Gartner
